

STEMClub: Service Transformation through Evidence Mobilisation

overcoming challenges to achieve knowledge
sharing across an Integrated Care System through
a Community of Practice

Shona Haining: Head of Research and Evidence
NECS

Joanne Naughton: NHS Knowledge and Library
Development Manager HEE

Addressing the gap between research evidence and application

Our aim is to mobilise evidence across the system in the following ways:

- Provide opportunities for those who work in evidence roles to connect as a group; understand who is working on what and make effective use of collective knowledge and insights.
- Build relationships between those with research and evidence skills and policy/decision-makers – making best use of scarce technical skills.
- Embed librarians into system level work streams to provide tailored support around accessing/using evidence.

Our Ambition

At every decision-making table, there will be someone with the skills, experience and knowledge to ensure that decisions are informed by relevant evidence

Community of Practice

- Networking events
- Consultation
- Match-making

Evidence-based decision-making

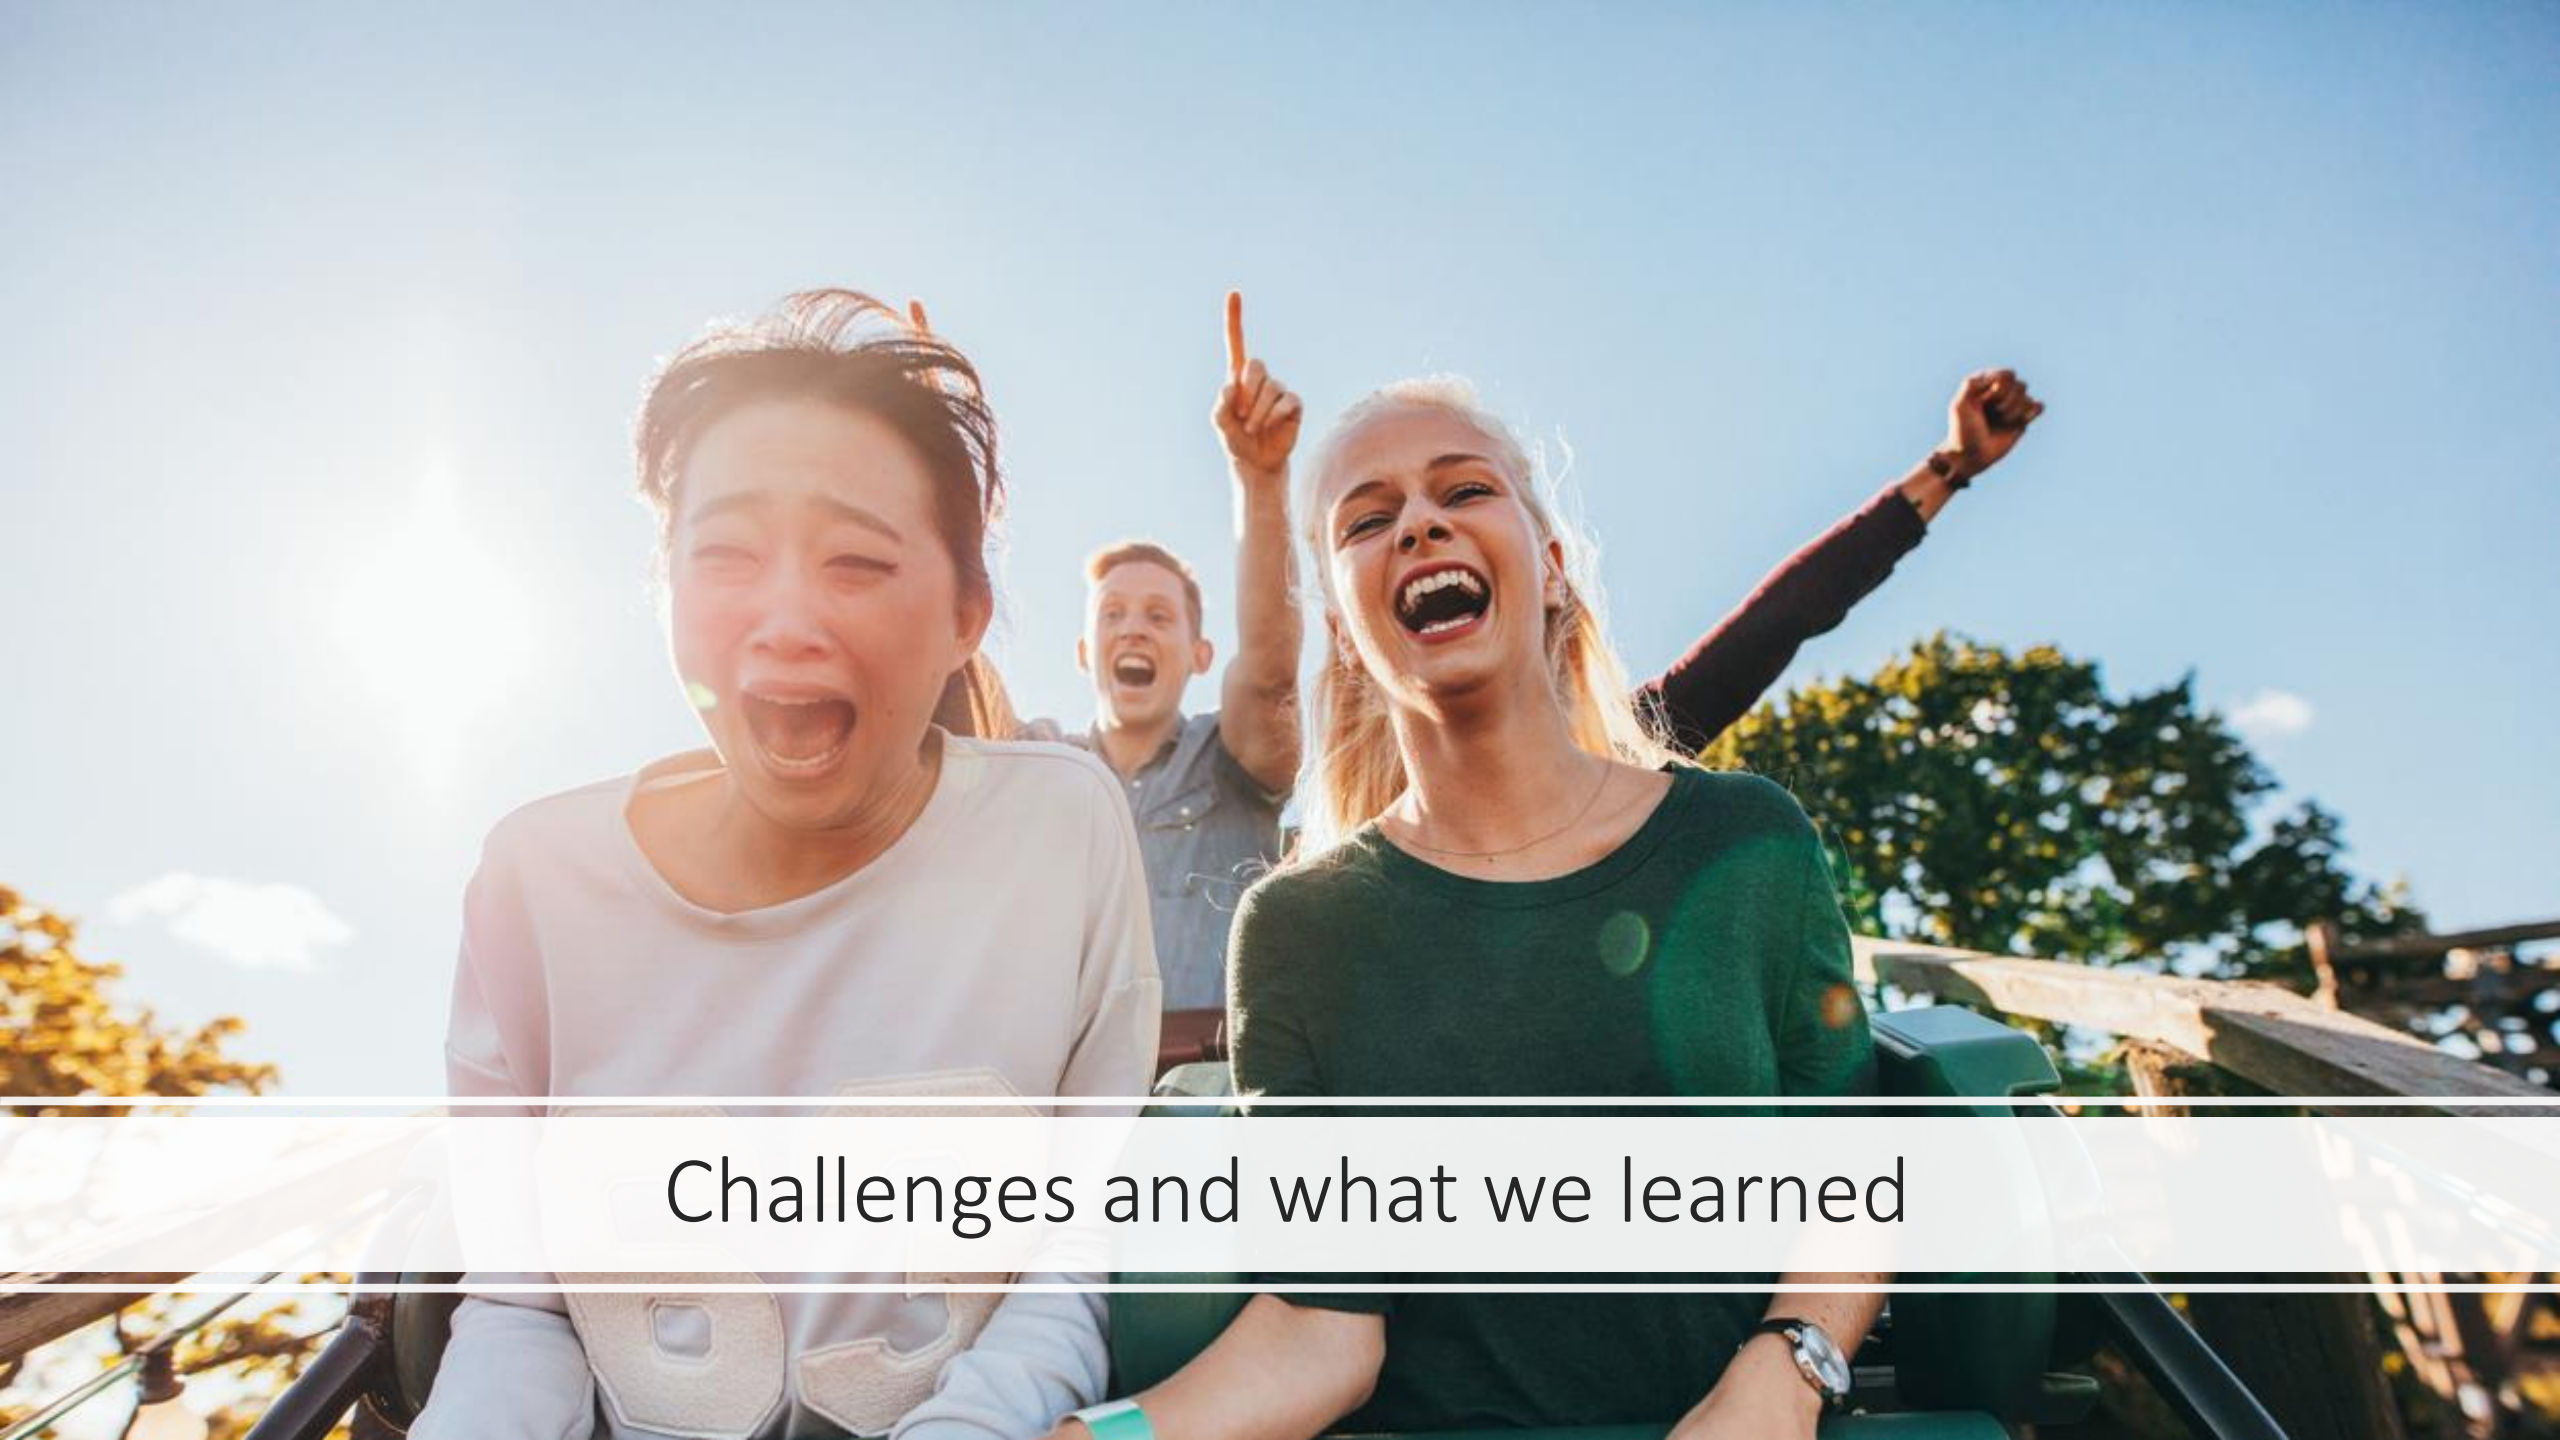

- Frailty
- Maternity care
- Mental health
- Urgent care
